

As a truck driver I find XM radio to be an invaluable tool in my job. I use the weather and traffic information in my trip planning and it prevents me from having to wait until I'm in a major area to find out how the traffic and weather are in the area. Please do not take this invaluable tool away from those of us out here on the road. If the dedicated weather and traffic information is taken away from XM we will have to wait until we in the major metropolitan areas before we will be able to search for a local station and hope to catch on that is putting out the information at that time, not to mention that local stations cater to the people that are familiar with their areas. The XM traffic and weather stations broadcast continuously and cover the major highways and interstates that we use.

Thank You.
